

Integrated Energy Therapy

- IET targets & facilitates the release of stored emotion from the cellular memory.
- Techniques involve acupressure applied to specific integration points located bilaterally along the spine.
- Produces measurable relaxation responses & significant stress relief.
- Originated in the early 1990's. Over 55,000 IET students in 75 countries worldwide.

Interested in the metaphysical aspects of healing modalities? IET also introduces the concept of angelic healing energy & techniques. **Not interested in the metaphysics?** No need to believe in or practice this aspect of the modality. IET techniques are a powerful approach to facilitate healing, with or with out the angelic connection.
